

**Math 41, section 1**  
**CRN 02531**

**Calculus I**

**Fall 2018**

**Instructor:** Rick Taylor (Roderic Taylor)

**E-mail:** [taylorroderic@fhda.edu](mailto:taylorroderic@fhda.edu)

**Office Hour:** In S12A 9:40 AM – 10:30 AM, Mon-Thur

**Text:** Pre-calculus with Limits (third edition) by Ron Larson

**Calculator:** A graphing calculator (TI-84, TI-83, TI-82, TI-85, or TI-86) is recommended for this class. Calculators which can do symbolic computation (such as the TI-89 or HP-49) are not allowed during quizzes and tests. Graphing calculators can be borrowed from the library.

**Attendance (extra credit):**

Beginning the second week of classes, attendance will be taken at the beginning of class. You must arrive on time before I begin lecturing to get credit for this, and stay for the whole class. If by the end of the quarter, you have been absent or late to class on 5 or fewer days, you'll receive a one percentage point bonus to your final score.

**Office Hour Visit (extra credit):**

If you come to my office to introduce yourself some time within the first five weeks of class, you will receive a half percentage bonus to your final score.

**Final Exam:**

The final exam for this class will be given on the date and time officially specified by the college for our class. Taking the final exam is required to pass the class. If due to unforeseen circumstances such as illness or family emergency you are unable to take the final exam at the scheduled time, you will need to take an incomplete for the class and arrange a time to make it up.

**Midterm Exams:**

There will be four midterm exams for this course. Our first midterm exam will be given Friday, October 12. The dates for subsequent midterms will be given at least one week in advance. Make-up midterms will not be given, but your final exam score can be used to substitute for up to two midterm scores.

**Homework and Quizzes:** Homework will be assigned but not collected. Instead quizzes will be given to give you feedback on how you are keeping up with the material.

**Grading policy:**

Your final grade for the course will be a weighted average of the scores from two midterms (15% each), a final exam (20%), and quizzes or other assignments (20%). Your final exam score can be used to substitute for up to two lower midterm scores. Midterm scores can be used to substitute for quiz scores on the same material. This will be done automatically. All scores are computed as percentages, and your final letter grade will be computed as follows:

- A 93% - 100%
- A- 90% - 92%
- B+ 87% - 89%
- B 83% - 86%
- B- 80% - 82%
- C+ 76% - 79%
- C 70% - 75%
- D 60% - 69%
- F 0% - 49%

An F will also be given in the case one gets a 0 on the final exam.

**Policy on dropping:**

If you decide you no longer wish to take this class, it is your responsibility to go online and formally drop the class by the appropriate deadline. If you fail to do so, I will be unable to change your grade or drop you at a later date. The only exception to this rule is that a student who fails to come to class or to contact the instructor during the first week of the class will automatically be dropped from the class.

**Policy on Academic Integrity:**

If a student is found to have cheated on an exam, they will receive a 0 for that exam. If it is a midterm, they will not be able to substitute the final exam grade for that midterm.

**Academic Help:**

Mathematics is a challenging subject which takes time and effort to master. Of course students differ in their backgrounds, but in general you should expect to do a minimum of 20 hours of work per week reading the book, doing homework, and thinking about the material. This is in addition to the time you spend in class. If you find you are having difficulty with the material, it is important to address the situation immediately, as it's easy to fall behind. The tutorial center in S-43 offers both drop in tutoring for brief questions, as well as one on one sessions with a designated tutor up to two hours a week. In addition, I encourage all students to come to my office hours listed above. Often, I'm able to help students talking with them individually in a way that's not possible in a large lecture class.

**Student Learning Outcome(s):**

\*Investigate, evaluate, and differentiate between algebraic and transcendental functions in their graphic, formulaic, and tabular representations.

\*Synthesize, model, and communicate real-life applications and phenomena using algebraic and transcendental functions.
